

Determining your site's GPS coordinates using WDNR's Webviewer

You can pinpoint your site by using the Surface Water Viewer at:

<http://dnrmaps.wisconsin.gov/imf/imf.jsp?site=SurfaceWaterViewer>

1. Click and drag to draw a rectangle around the area that you want to zoom into.
2. Repeat step 1 until you get sufficiently zoomed in on your stream locations to pinpoint your monitoring spot.
3. Click the "Identify" button to change modes from "Zoom In" to "Identify".
4. Click on the map at the monitoring site and the left side panel viewer will give you the LAT/LONG for that point.
